

TAPGO

Contract Automation System

Software Requirements Document

Document Version: 1.0 — Initial Release
Date: 30 April 2026
Client: TAPGO / MS-Architecture & Technologies Sàrl
Status: Draft — For Review & Sign-off

1. Introduction

1.1 Purpose

This document defines the functional and non-functional requirements for the TAPGO Contract Automation System — a web-based onboarding flow that enables restaurant and hospitality businesses to self-onboard onto the TAPGO Kiosk POS platform, generate a legally valid contract, sign it digitally, and submit their restaurant menu — all without requiring manual intervention from the TAPGO sales team.

1.2 Background

Currently, TAPGO onboards new customers through a fully manual process: a sales representative meets the customer, determines the product configuration, and provides contract documents for physical signature. This process is time-consuming, not scalable, and dependent on in-person meetings.

Following a discovery meeting on 30 April 2026, the decision was made to digitise and automate this entire flow via a self-service web application.

1.3 Scope

The system covers the following end-to-end journey:

- Customer receives a unique link from the TAPGO team (or accesses via a website button).

- Customer completes a multi-step onboarding form in their preferred language.
- A personalised contract (Contrat + Avenant) is auto-generated in the selected language.
- Customer signs the contract electronically.
- Customer uploads their restaurant menu.
- The completed contract and menu are delivered to contract@tapgo.ch.

1.4 Out of Scope (Phase 1)

- Customer back-office portal / dashboard (planned for Phase 2).
- CRM or ERP integration.
- Automated payment collection or Stripe account creation (customer does this independently).
- Physical hardware shipping logistics.

2. Stakeholders & Users

TAPGO Sales Team	Sends onboarding link to prospective customers; receives completed contracts.
End Customer	Restaurant/business owner who completes the self-service onboarding flow.
TAPGO Back Office	Receives completed contract PDFs and menu files via email; configures the hardware.
TAPGO IT / Dev Team	Builds and maintains the system.

3. End-to-End User Journey

The following describes the complete journey from entry point to completion.

Entry Points

1. TAPGO team sends a unique onboarding URL to the customer (e.g. onboard.tapgo.ch?ref=XYZ).
2. Customer clicks a 'Get Started' button on the TAPGO public website, which opens the same flow.

Step 1 — Language Selection & Business Information

The very first screen asks the customer to select their preferred language. All subsequent steps are displayed in that language.

Supported Languages:

-  German (Deutsch)
-  French (Français)
-  English
-  Turkish (Türkçe)
-  Italian (Italiano)

After language selection, the customer fills in their business details:

Field	Description	Maps To Contract Field
Company / Legal Name	Full registered company name	Client name (Avenant §1)
Company Address	Registered address	Client address (Avenant §1)
Restaurant Name	Trading name of the restaurant	Restaurant name (both docs)
Restaurant Address	Physical restaurant address	Restaurant address (Avenant §1)
Contact Person	Name of signatory / contact	Bouafif Alicia equivalent
Email Address	Primary contact email	Used for document delivery
Phone Number	Contact number	Support / follow-up
Number of Kiosks	Quantity of self-order kiosks (bornes)	Borne(s) de commande × CHF 99/mo
Number of POS (Caisses)	Quantity of cashier POS terminals	Caisse(s) × CHF 49/mo
Number of Printers	Auto-calculated or editable	Imprimante(s) — included in price
Stripe Terminals (qty)	Customer orders directly; for info only	Noted in Autres équipements
Contract Start Date	Left blank; filled on installation day	§2 Avenant — Date d'installation

Monthly total is calculated automatically: (Kiosks × CHF 99) + (POS × CHF 49) = Total CHF/month

Step 2 — Contract Generation & Signature

Once the form is submitted:

3. The system generates two documents in the selected language:
 - Contrat de mise à disposition (General Conditions) — pre-filled with customer details.
 - Avenant Contractuel (Commercial Addendum) — pre-filled with selected hardware, quantities, and computed monthly price.
4. The customer is presented with a preview of both documents (rendered in-browser as PDF).
5. The customer reviews the documents and signs electronically via one of the following methods (see §5 for signing solution decision):
 - Option A — Embedded e-signature widget (e.g. DocuSign, HelloSign/Dropbox Sign, or equivalent).
 - Option B — Customer downloads the PDF, signs physically, and uploads the signed scan back in this step.

6. Once signed, the system records the signature and marks Step 2 as complete.

Note on Signing Solution:

An embedded e-signature solution (Option A) is strongly recommended for UX and legal validity. The specific provider should be decided during technical scoping. Option B is a viable fallback for Phase 1.

Step 3 — Menu Upload

The customer uploads their restaurant menu so TAPGO's back office can configure it on the kiosk and POS hardware before delivery.

- Accepted formats: PDF, JPG, PNG, XLSX, DOCX (any combination of files).
- Multiple files can be uploaded (e.g. separate files for food and drinks menu).
- Maximum file size: 20 MB per file; up to 10 files.
- The customer may add a text note or special instructions for the back office.

Step 4 — Confirmation & Submission

On clicking 'Finish' / 'Submit':

7. An automated email is sent to contract@tapgo.ch containing:
 - The signed contract PDF (Contrat + Avenant, merged or as two attachments).
 - All uploaded menu files.
 - A structured summary of the customer's form responses (HTML or plain text body).
8. The customer receives a confirmation email with a copy of their signed contract.
9. The system displays a success screen thanking the customer and explaining next steps.

4. Functional Requirements

4.1 Language & Localisation

ID	Requirement	Priority
L-01	The system must display a language selector as the first interaction, before any form fields.	Must Have
L-02	All UI labels, buttons, error messages, and instructions must be translated into German, French, English, Turkish, and Italian.	Must Have
L-03	Both generated contract documents must be available in all 5 languages.	Must Have
L-04	Language selection must persist across all steps in the same session.	Must Have
L-05	The confirmation email sent to the customer must be in the language they selected.	Should Have

4.2 Onboarding Form (Step 1)

ID	Requirement	Priority
F-01	All required fields listed in Section 3 must be present in the form.	Must Have
F-02	The system must validate all required fields before allowing progression to Step 2.	Must Have
F-03	Monthly price must be computed in real-time as the customer adjusts quantities.	Must Have
F-04	Number of printers should default to (Kiosks + POS) but be manually editable.	Should Have
F-05	The form must be mobile-responsive and usable on smartphones.	Must Have
F-06	A progress indicator (Step 1 of 4, etc.) must be shown at all times.	Must Have

4.3 Contract Generation (Step 2)

ID	Requirement	Priority
C-01	The system must populate all customer-supplied data into the correct fields of both contract templates.	Must Have
C-02	Generated contracts must be available for preview before signing.	Must Have
C-03	The contract date field ('Date effective d'installation') must remain blank in the generated document, to be completed on installation day.	Must Have
C-04	The system must support at least one electronic signature method (embedded widget or upload).	Must Have
C-05	Signed contracts must be stored securely and linked to the customer's submission record.	Must Have
C-06	The system must prevent progression to Step 3 without a completed signature.	Must Have
C-07	The Avenant must override commercial terms per the contract hierarchy defined in §8 of the Avenant.	Must Have

4.4 Menu Upload (Step 3)

ID	Requirement	Priority
M-01	The upload interface must accept PDF, JPG, PNG, XLSX, and DOCX file types.	Must Have
M-02	The system must support uploading multiple files simultaneously.	Must Have
M-03	The system must enforce a per-file size limit of 20 MB and a maximum of 10 files.	Must Have
M-04	An optional text note field must be provided for special menu instructions.	Should Have
M-05	Uploaded files must be included as attachments in the notification email to TAPGO.	Must Have

4.5 Submission & Notifications

ID	Requirement	Priority
N-01	On final submission, the system must send an email to contract@tapgo.ch with all required attachments and a customer summary.	Must Have

ID	Requirement	Priority
N-02	The customer must receive a confirmation email with their signed contract attached.	Must Have
N-03	The system must display a clear success/confirmation screen after submission.	Must Have
N-04	Submission data must be stored in a backend database for future retrieval (Phase 2 portal).	Should Have

5. Non-Functional Requirements

ID	Requirement	Priority
NF-01	The application must be accessible via standard web browsers (Chrome, Safari, Firefox, Edge) on desktop and mobile.	Must Have
NF-02	Page load time must be under 3 seconds on a standard 4G mobile connection.	Should Have
NF-03	All data in transit must be encrypted via HTTPS (TLS 1.2+).	Must Have
NF-04	The system must comply with Swiss data protection law (LPD) and GDPR.	Must Have
NF-05	Customer data must not be retained beyond legal necessity without explicit consent.	Must Have
NF-06	The system must have at least 99% uptime during business hours (CET).	Should Have
NF-07	The codebase must be maintainable and documented so TAPGO's dev team can extend it.	Should Have
NF-08	All uploaded files and generated contracts must be stored securely with access controls.	Must Have

6. Technical Considerations

6.1 Contract Template Engine

Contract templates must be maintained as editable source files (e.g. HTML, DOCX, or a template format). A templating engine (e.g. Handlebars, Jinja2, or equivalent) should merge customer data into templates and render them as PDF for preview and download.

6.2 Electronic Signature

The recommended approach is to integrate an established e-signature API. Candidate providers include:

- Dropbox Sign (formerly HelloSign) — REST API, good free tier.
- DocuSign — enterprise-grade, higher cost.
- Skribble — Swiss-based, legally binding under Swiss/EU law (eIDAS). Strongly recommended for compliance.

Alternatively, for Phase 1, the system may implement a 'download, sign, upload' flow to reduce integration complexity, with a proper e-signature integration planned for Phase 2.

6.3 Email Delivery

An email delivery service (e.g. SendGrid, Mailgun, or AWS SES) should be used for reliable transactional email delivery. Direct SMTP is not recommended for production.

6.4 File Storage

Uploaded menus and signed contracts should be stored in a secure cloud storage bucket (e.g. AWS S3, Google Cloud Storage, or Cloudflare R2) with private access and a retention policy.

6.5 Recommended Tech Stack (Suggestions)

Frontend	Next.js (React) — supports multilingual SSR, mobile-responsive.
Backend / API	Node.js or Python (FastAPI / Django) — contract generation, file handling.
PDF Generation	Puppeteer (HTML→PDF) or a DOCX template engine + LibreOffice conversion.
Database	PostgreSQL — stores form submissions and submission metadata.
File Storage	AWS S3 or Cloudflare R2 — stores menus and signed contracts.
Email	SendGrid or Mailgun — transactional email with attachment support.
E-Signature	Skribble API (recommended) or Dropbox Sign.
Hosting	Vercel / Railway / AWS — GDPR/LPD compliant, preferably EU region.

7. Future Phases (Out of Scope — Phase 1)

Phase 2 — Back-Office Portal

- TAPGO admin portal to view all submitted contracts, download documents, and manage customer status.
- Customer portal to track onboarding progress and view their contract.
- Search, filter, and export customer submission data.

Phase 3 — Integrations

- CRM integration (e.g. HubSpot or Pipedrive) to auto-create deals from submissions.
- Hardware inventory management — flag stock availability on order submission.
- Stripe account linking — guide customer through Stripe onboarding directly in the flow.

8. Open Questions & Decisions Required

#	Question	Owner
Q1	Which e-signature solution will be used — Skribble, Dropbox Sign, or download/upload for Phase 1?	TAPGO + Dev Team
Q2	Should the system assign a unique reference number to each submission for tracking?	TAPGO
Q3	Which domain/URL will the onboarding flow be hosted on? (e.g. onboard.tapgo.ch)	TAPGO IT
Q4	Should the unique link sent to customers expire after a set period (e.g. 7 days)?	TAPGO Sales
Q5	Who manages the contract templates when legal text needs to be updated?	TAPGO
Q6	Are there any branding assets (logo, colours) to be applied consistently across the flow?	TAPGO
Q7	Should the menu upload step be mandatory, or can customers skip and submit later?	TAPGO
Q8	Should a CC email be sent to the customer's contact person at the time of submission?	TAPGO Sales

9. Approval & Sign-Off

This document requires review and sign-off before development work commences.

Role	Name	Signature & Date
TAPGO Product Owner		
TAPGO Technical Lead		
Development Team Lead
